---

Use the land area from the assessor's map, either the number written inside the parcel, or calculated from the parcel dimensions. Per the MDP:

**"Lot Square Footage Defined. Lot square footage is defined as the total amount of area within the borders of the parcel. The borders of a parcel are defined on the County Assessor parcel maps."**

So that's what we'll use.

Hi Dennis

I started working on this and have a question.

The LA County Assessor's website now provides 3 separate measurements for land area (Total SqFt (GIS) / Total SqFt (PDB) / Usable SqFt).

Which measurement are we supposed to use?
